

TESTED & PROVEN

The "SPINNER" was originally developed by NHTS, in 1995. It gave us the ability to load hose quickly with less personnel and greater efficiency. We use the "Spinner" on daily basis with millions of feet of hose rolled across them annually. The "SPINNER" is a tool that should be standard equipment on every engine or pumper in your department.

FIRE HOSE RELOADING TOOL

Distributed By:

NATIONAL HOSE TESTING SPECIALITIES INC.

The "SPINNER"

- > National Hose Testing Specialties Inc. is the leader in innovation for fire hose service testing. Since our beginning we have strived to be the best in the business.
- > With this in mind, NHTS began to look for a faster, safer, more cost effective way to reload fire hose.
- > The conventional method often led to couplings being dragged or time spent unrolling hose. We needed a way to load hose faster, with less effort to increase productivity and promote employee health and safety. For these reasons, we developed a tool we call the "SPINNER" and now it is available to you!
- > The "SPINNER" is definitely a better way to load fire hose. We think you will agree.

DURABILITY

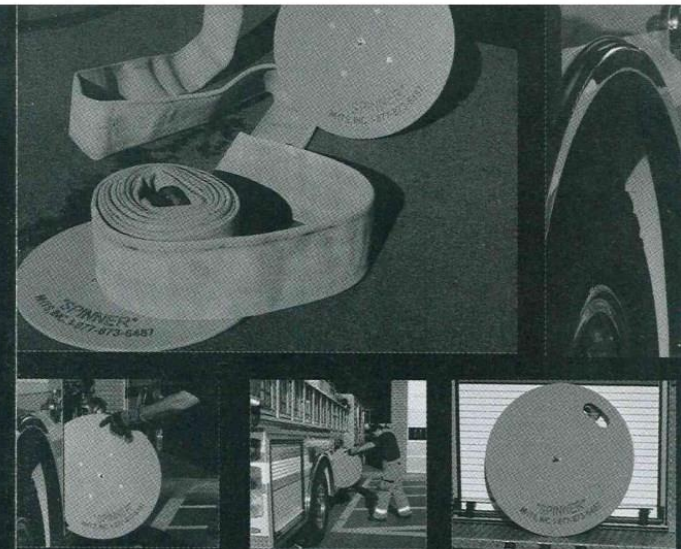

- > The "SPINNER" is built with top grade materials. The highly visible safety yellow deck is made of impact resistant polymer plastic. The stainless steel center guide pin, large surface, multi-bearing rotation system and non-slip heavy-duty rubber ground contact surface make the "SPINNER" virtually indestructible. The "SPINNER" has no sharp edges and no pinch points to damage hose during reloading.

STORAGE & PORTABILITY

- > The "SPINNER" fits into most side or top compartments so it is always with you. The "SPINNER" is extremely lightweight and portable.

ERGONOMICS

- > Studies show that employees who work consecutive work days and longer hours risk ergonomic related injuries. The "SPINNER" was designed to help prevent injuries resulting from lifting and moving of fire hose. The "SPINNER" will eliminate the need to lift large diameter hose during loading.

COST

- > The "SPINNER" is a proven and cost effective tool designed to reduce firefighter injuries, damage to hose and increase overall efficiency.
- > Other hose loading cumbersome and cost hundreds of dollars more. The "SPINNER" will pay for itself by saving you re-loading time on the fire scene, drill ground, or at the station.
